Best Tips and Tricks To Fix Avast Blocking League Of Legends

Are you facing errors in League of Legends? It may be due to Avast blocking your game, so we've come up with the best solutions to make your day.

The popularity of League of Legends cannot be understated. It is played by millions of players around the globe. Teenagers are in awe with the game collecting money penny by penny until they get to buy it.

Managing such a huge game is a daunting task. But the developers have done their best in trying to make the complex client Lol error free. However, many PC gamers have complained about Avast Antivirus blocking the program, so we have come up rounded everything related to the error.

First, lets get into why this error occurs and then we walk through steps to resolve the matter.

Why does the League of Legend Avast Problem Occur?

Avast Antivirus blocks league of legend either due to a false trigger while scanning the computer or Avast blocking the program if it is deemed as potentially harmful. Avast detects the game

wrongfully as trojan virus. It may also block the game if it detects some files of the game missing or corrupted.

How to fix the league of legends Avast problem

Without further ado, lets get into solving the error once and for all.

Turn Off Exploit Deetction

- Open the **Avast Antiirus** from the system tray.
- Click on "**Menu**" and then go to "**Settings**".
- Under the **Protection Menu**, click on **"Core Sheilds"**
- Locate the **"Enable Anti Exploit Sheild"** in the sub-menu and **uncheck** the box next to it.
- Click **Save** and then exit.

This should have resolved the issue if not, then go on with trying the next method.

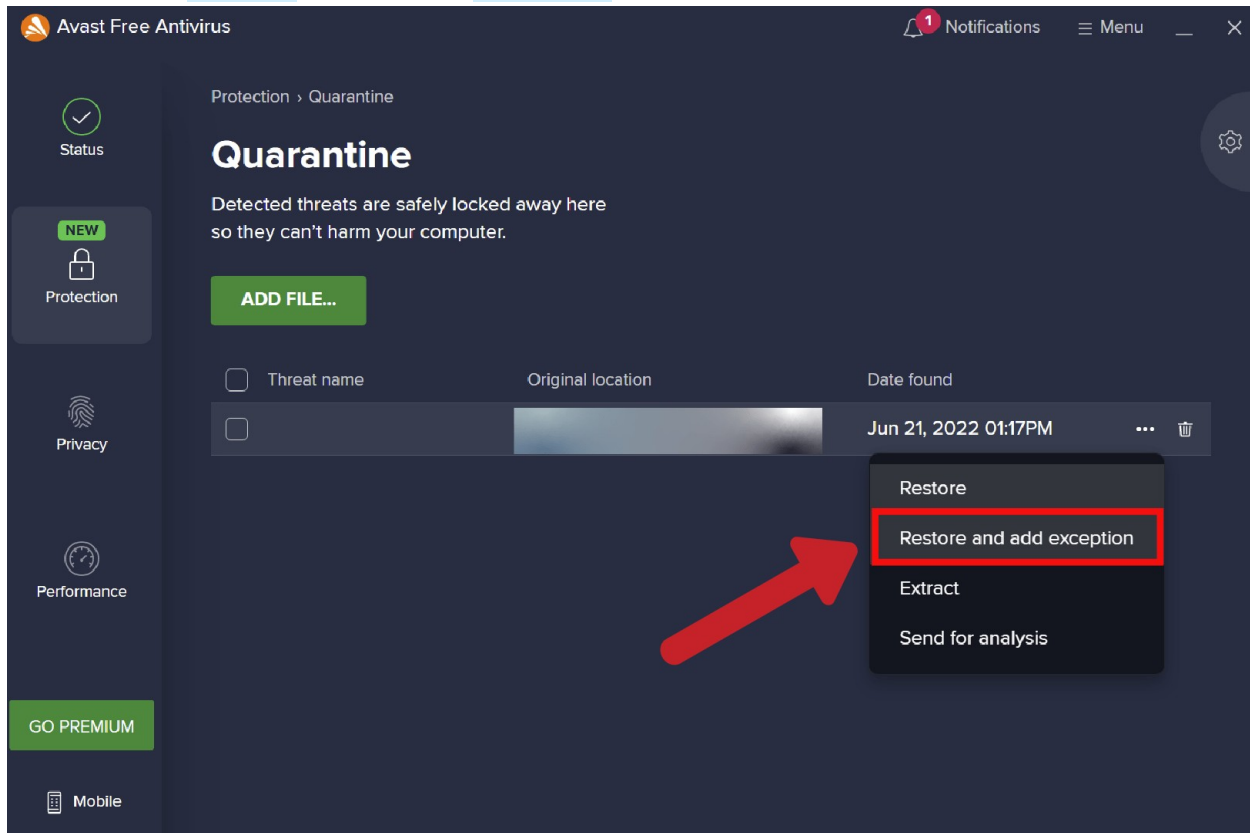

Add League of Legends files as Exclusions

There are two methods to add files into the Exclusion list.

Adding Exclusion from the Virus Chest or Quarantine

There a considerable that Avast would have detected the game files as a bugs or viruses.

- Launch the **Avast Antivirus** by double clicking its icon in the system tray.
- Navigate to **Protection.** Click on Quarantine.

- If you see files in the quarantine related to League of Legends, right click on them and select **Restore and Add an Exclusion**

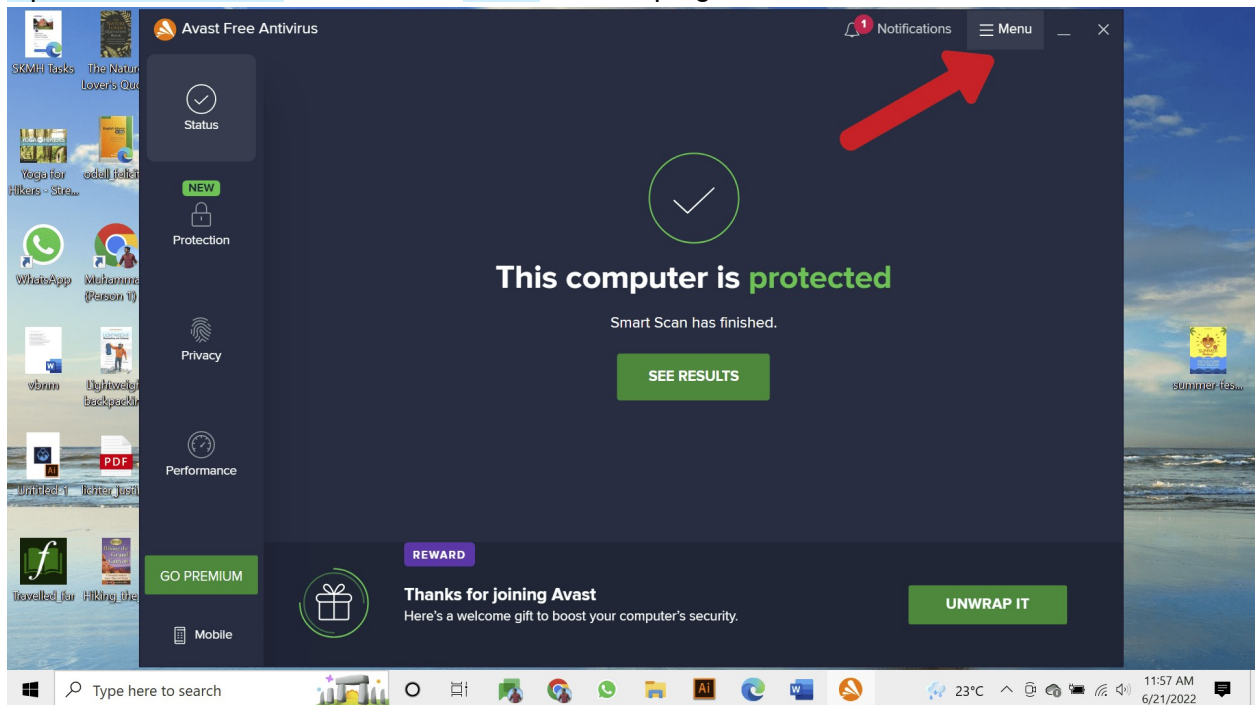

ProTip

In case you don't find files in Quarantine, you can smart scan the computer. Here's how to do a scan on your computer.

- Open **Avast** and go to Protection
- Click Scan Now under the Full Scan header
- If the scan detect game files as virus, you can add exclusions from the method described above.
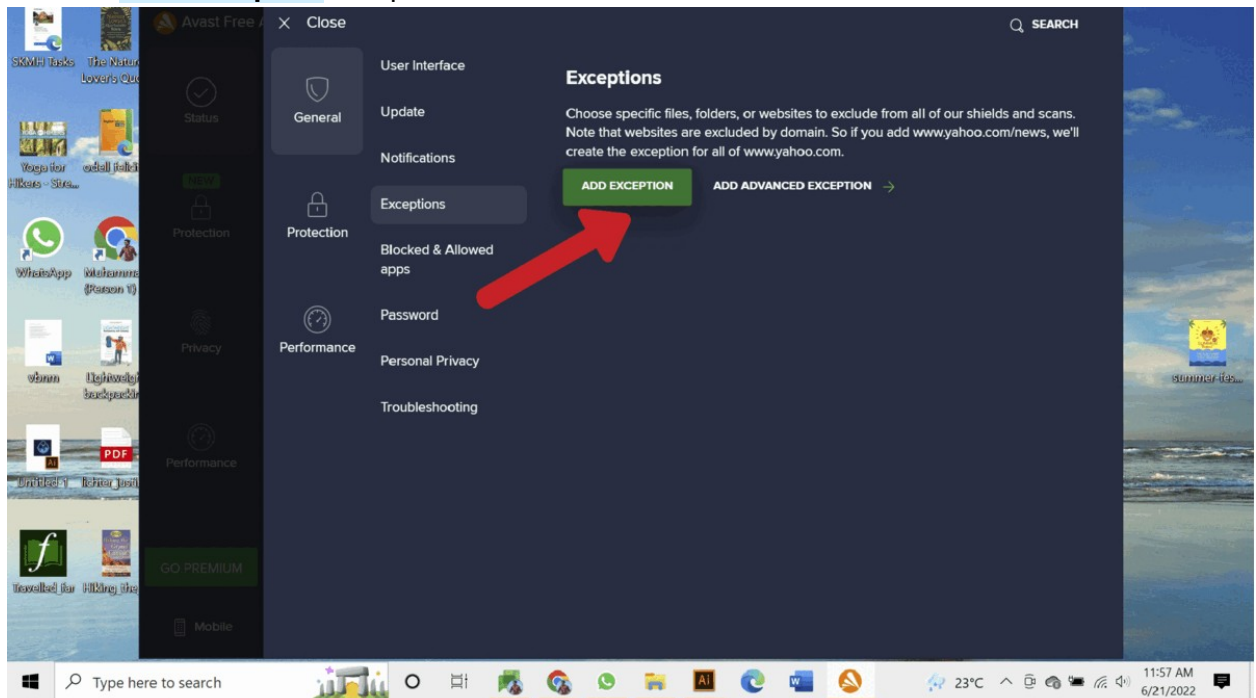

Adding Exclusion from the Settings

- Open **Avast** antivirus, and click on **Menu** at the top right corner.

- Press **Settings** and under the General tab navigate to Exceptions

- Click on **Add Exception** and press **Browse**

- Go to Local Disk: C < Program Files < League of Legends or your game's installation folder and locate the following four files. *LeagueofLegends.exe, LeagueClient.exe, LeagueClientUx.exe and LeagueClientUxRender.exe*
- Press **Add Exception** once again.
- **Exit** and restart your PC.

Disable Core Shields

- Click on the **upper arrow button** to expand the system tray.
- On the avast icon right click and locate **Avast Sheilds Control**
- Press **Disable shields for 10minutes**

- Check if the game works.

Protip

For extra asssurity, that Avast Sheilds have been turned off,
- Open the avast settings, and under the "**Protection Menu"** proceed to **"Core Sheilds"**
- Check if each core sheild is **turned off**. These include the web shield, file shield, behavioral shield and Antirootkit. If not, disable each sheild once at a time.
- **Save** settings and exit.

Update Avast

Updating the Avast Client Software will resolve multiple issues related to game errors and bugs. The newer version of Avast offers better compatibility with anti-debug and anti-cheat measures. It also offers a lower memory usage and a do not disturb mode, making gameplay efficient. Here's how to update the Avast client.
-
- Open the System Tray and click on the Avast icon to launch the app.
- Click **Menu** in the upper right corner and select **Settings** from the options.
- Under the general tab go to **Update.**
- Click on **Check for Updates** and wait patiently until the antivirus updates.

- Restart your PC.

Uninstall Avast Antivirus Software

The last solution that may work is uninstalling the Avast Antivirus. Here's how to do it on a Windows 10 pc.

- Open **Settings** by right clicking on the start button.
- Click on **Apps**.
- Type **Avast** in the search bar.
- Click **Uninstal**l and when another promt appear press the same.
- Proceed to **uninstall** the antivirus program and restart your PC
- Finally, check if the game works fine.

Conclusion

There are multiple things that you should try to solve League of Legends Avast problem. What works for most people is adding the files in the Quarantine in to the exception list. However, if that dosnt work for you try disabling the antivirus. Uninstalling the avast client is a shot in the air which may work. Contact support if all the above solutions don't work.

Ending it here, hoping you have become a legend until now.
